SUMMARY

I build small tools that take repetitive manual work off your hands: scrapers that collect data from sites that allow it, scripts that clean and check Excel and CSV files, web forms connected to a database, and fast websites for small businesses. You get working code, clear setup instructions and a plain note on what the tool does not cover. I work in Spanish, or in English through written messages.

SERVICES

- **Data extraction.** Playwright scrapers for public, permitted sources, exported to Excel or CSV, with page limits, delays between requests and a log of anything that failed.
- **Excel, CSV and PDF cleanup.** Row validation, consistent formats, flagged duplicates and missing fields, and output files that are safe to open in Excel.
- **Websites.** Fast, responsive static sites built with Astro: menus, galleries, booking or contact flows, English/Spanish versions, hosting on GitHub Pages or similar.
- **Forms, APIs and integrations.** Web forms validated in the browser and on the server, data stored in PostgreSQL, REST APIs with FastAPI, and n8n workflows that send files or data to your system.
- **Small fixes.** Bugs and small improvements in Python, JavaScript/TypeScript, React or Next.js code.

SELECTED WORK

Book Data Extractor Pro — Scraper that exports catalog data to Excel and CSV View code

- Command-line tool with per-site profiles, page limits and delays. Prices are kept as exact decimals, duplicates are removed, and failed items are logged instead of stopping the run. Tested automatically on GitHub Actions.

QuoteFlow — Spreadsheet and PDF import with human review View code

- Upload CSV, Excel or PDF quotes; the app checks every row, flags errors and duplicates, and lets a person correct or exclude rows before anything is saved. Login, audit log and an optional n8n intake endpoint.

LeadFlow — Lead capture form and mini-CRM View code

- Contact form that never saves the same lead twice, plus a CRM view to search leads, change their status and keep follow-up notes. Tested end to end with Playwright.

Hervor and Aurea — Concept websites for fictional businesses Hervor demo · Aurea demo

- A one-page café site with menu, open/closed status, gallery and a table-booking flow, and a multi-page hotel site with scroll animations (GSAP) and room galleries. Both built with Astro and tested at mobile widths with Playwright.

TOOLS

Python, Playwright, openpyxl, pypdf, FastAPI, PostgreSQL, SQLAlchemy, Next.js, React, TypeScript, JavaScript, Astro, GSAP, n8n, Docker Compose, Git, GitHub Actions

EDUCATION AND LANGUAGES

Computer Engineering studies at Universidad Autónoma Tomás Frías (UATF), Potosí, started 2026

Spanish: native · English: basic, written communication preferred
